Ensuring Africa stays covered

Afrisheet opened its doors in Middelburg in June 2016. From the start, the business has prioritised passion and commitment in delivering unparalleled service at competitive prices. Already we have emerged as a leading roofing manufacturer and supplier in the Mpumalanga area.

Afrisheet has grown from strength to strength in an exceptionally short time. Starting with a single original roofing line, we are continually expanding capacity to keep up with market demand. We're excited to expand even further in future, allowing us to provide all roofing-related products.

Our business is built on family principles, and is managed by father and son. Hennie Potgieter is well-known in Mpumalanga for his expert advice and wealth of knowledge in the Roofing Industry. He has been actively involved in the industry for more than 10 years, and uses that experience now to benefit Afrisheet customers.

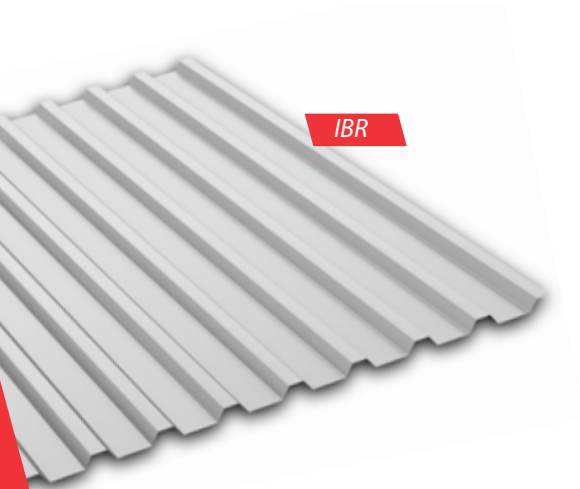

At Afrisheet we believe that we are part of something bigger than just selling a product or providing a service. We subscribe to a philosophy of transparency, accountability, integrity and excellence in all our business dealings.

This is because we consider ourselves integral in creating secure, structurally sound workshops, homes, buildings, silos and architectural attractions! This is who we are; we want to build lasting relationships with all stakeholders in order to create a sustainable future for all.

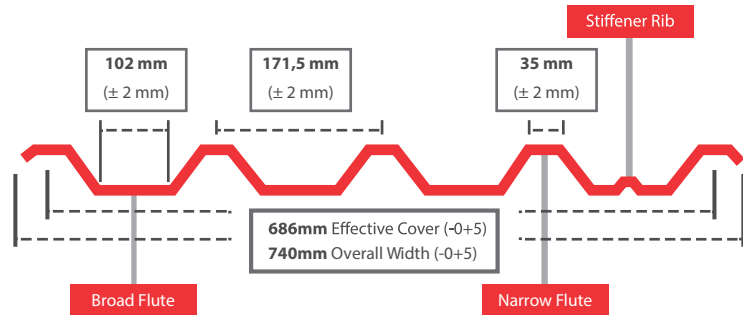

Quality Products. Affordable Prices.

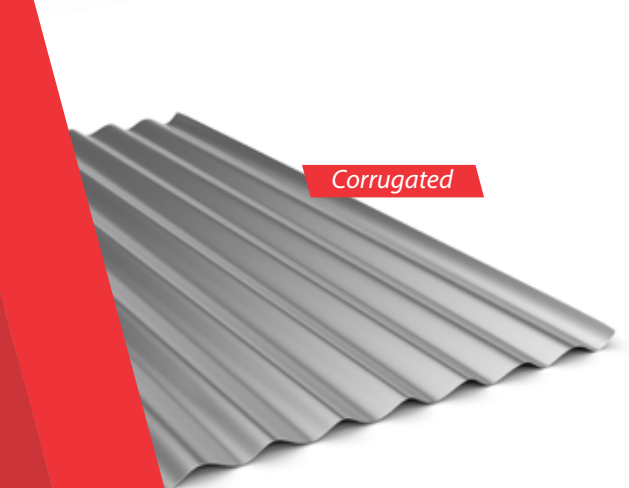

The two most popular roofing profiles that we manufacture in-house are IBR and Corrugated.

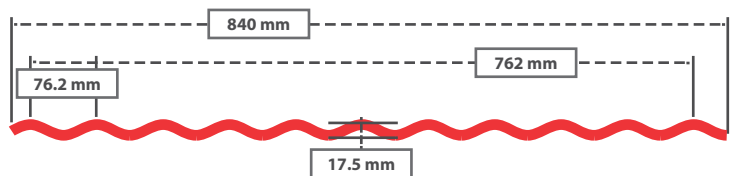

IBR

A well-known and popular profile in the Building and Construction Industry due to its drainage characteristics, as well as its strength with aesthetic value. The stiffening rib gives added stability. This profile can be cranked, curved and bullnosed as per client needs. The load span characteristics are dependent on the application and product used.

Corrugated

The most common profile used in the Building and Construction Industry, with a larger effective cover than IBR. The S-rib profile is structurally very strong. This profile can be cranked, curved and bullnosed as per client requirements. The load span characteristics are dependent on application and product used.

Take a closer look at our main products:

These profiles can be supplied in galvanised, colour, stainless steel or polycarbonate product.

Galvanised

- Zinc-coated sheet with a versatile range of applications in building and construction.
- The steel provides strength/formability which is classed according to moderate bending, severe bending and load bearing application. (ISQ Rating)
- The zinc coating provides corrosion protection, which is classed according to the total zinc coating mass to both the top and bottom surface. (Z Rating)
- Thickness varies from 0.25mm to 0.80mm.
- All sheet conforms to the SAN4998, SANS3575, EN 10346, ASTM 653M requirements and ISQ standards. (Unique to ArcelorMittal)

Colour

- Used for its aesthetic value by architects, homeowners and builders.
- Galvanised sheets are coated with a primer and a top colour coat.
- It maintain its strength/formability and corrosion qualities.
- We mainly sell Chromadek®, Colorbond® and Colourplus.
- Thickness varies from 0.47mm to 0.80mm.
- Suppliers offer warranties on their product subject to specific terms and conditions.

Stainless

- Iron based (ferrous) materials are used to manufacture stainless steel.
- Stainless steel in roofing application can be classified under:
 - Austenitic: excellent corrosion resistance and formability. (304)
 - Ferritic: good corrosion resistance and formability. (3CR12)
- Selecting the correct product characteristics for the specific application is key with stainless steel.
- The most popular thickness is 0.60mm.

Polycarbonate

- Used in commercial greenhouses, garden centres, sunrooms, porches, verandas, skylights and integrated with buildings to let in natural light.
- Transparent, lightweight and virtually unbreakable.
- UV screening and a good flammability rating.
- Available in different colours and with different light transmission properties.
- Thickness varies from 0.80mm to 1.20mm.
- Suppliers offer warranties on their product subject to specific terms and conditions.

SO MUCH MORE

Afrisheet not only supplies and manufactures quality goods such as:

- ◆ Roof Fasteners
- ◆ Lipped Channels
- ◆ Flashings
- ◆ Bullnosing
- ◆ Industrial Rainwater goods
- ◆ Cranking
- ◆ DIY Carports
- ◆ Curving and more...

We also provide top class levels of service as well as offer **installations, fittings** and even **consultation.**

Call us right now at

013 246 1564

or see the **back page of the company profile for our full contact details** so that you can place your first order today!

WE DELIVER!

Roof Fasteners

Lipped Channels

Flashings

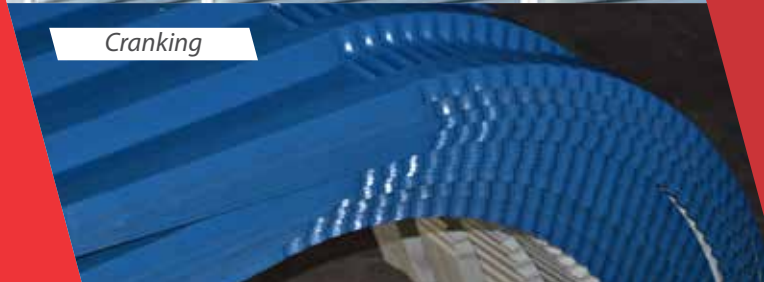

Bullnosing

Industrial Rainwater Goods

Cranking

DIY Carports

Curving

“ Afrisheet’s goal is to provide industry leading quality at prices that make sense for your business. ”

AfriCONSTRUCT

- ◆ Fitting of any roof sheeting and accessories.
- ◆ Professional roof sheeting installations.
- ◆ Technical and product consultation on your project.

Over 100 happy customers have already joined us at Afrisheet, we hope to see you soon!
